Co-creating hope for a better future!

Habiba Innovation Lab on tour 2026/27 - Events with Ann & Henrik

We are many. Social & tech innovators, entrepreneurs, ecosystem & agricultural care takers, leaders in industry, NGO's & public administration, educators, pro-active people in business & privately, caring not only for our personal life or the success of our business, but for „**the whole**“.

What ever: Nobody has said so far, „it's easy“. Sometimes the sense of purpose fades and hope declines. Sometimes we feel alone with making the „right decisions“ and over-challenged by relational issues. All of us are aware that the **social soil - the relational field that connects us all** - matters for the yield of our projects. *Habiba Innovation Lab on tour* is all about “cultivating social soil”, locally and globally.

It is an experimental space to explore questions such as:

- 🌍 What are you caring for, and what is the „burning question“ that is challenging you?
- 🌍 How are the relationships between the key players in your field, and what could help to set even more possibilities free?
- 🌍 What are the unheard voices or unintegrated potentials, that need attention and acknowledgement?
- 🌍 What creates hidden costs, and how can we avoid this?
- 🌍 What becomes possible, when you and me connect?

AN INITIATIVE TO REINSTATE THE
TRUSTWORTHINESS OF HUMANKIND

For the exploration we use a social key technology called „**Systemic Innovation Constellations**“.

It's a way of embodied system mapping which sets our emotional and collective intelligence free.

We gain new perspectives for up-to-date challenges.

It helps to create **fields of coherence** between the planet we live on, the purpose that calls us and the profit we need to live our lives and run our projects.

Background:

The Habiba Innovation Lab is an initiative that started in **Nuweiba in South Sinai/Egypt** in 2025. Its place of origin is an organic and regenerative farming project - founded 2007 on desert sand between the Red Sea and the Sinai mountains - by Maged El Said (Egypt) and Lorena Roncati (Italy). Together with the growing community, including Bedouin tribes, national & international universities, global ecosystem networks and political stakeholders, they are inspired by the vision of a greening of the whole region of Nuweiba.

The Labs mission is **not** limited to the one place:

it is to create hope for a better future for the young generations and the ones to come through hands-on, place-based innovative solutions in the fields of food security & ecosystem regeneration, community living & education, sustainable economy & workplaces.

We believe that this can only be achieved through a growing global connectedness „from heart to heart“, letting go of the old paradigms of „Global North“ and „Global South“ and going beyond.

This is why we, Ann & Henrik (Germany), co-founders of the Habiba Innovation Lab, are going **on tour 2026/27:** to co-create a new field of innovation & learning together and to connect with **you!**
